

**MetLink** – **Weathercam watch!**

Your Name ..... Date .....

Your aim is to study weathercams in different parts of the world and to investigate the weather at each of the locations.

Use the **MetLink** website to find 4 weathercam locations in different parts of the world.

1. Mark each **weathercam location** on the map below.

2. Visit each **weathercam** and **observe** any evidence of current **weather conditions**.

Look for the following useful **weather clues**:

- a) Is it daytime or night time? How long are the shadows?
- b) Is the sky clear or cloudy?
- c) Are surfaces, such as roads, wet or dry? Is there evidence of snow or ice?
- d) Is there evidence of vegetation or is the ground bare?
- e) How are people dressed - for hot or cold conditions?
- f) Is there any evidence of wind speed and/or direction – flags, smoke, trees, waves?
- g) Is the area urban or rural? Is there any evidence of smog, mist, fog, haze, dust, smoke?

3. Now write a brief **weather description** of each weathercam location. You could copy weathercam pictures and paste alongside your description.
